WORK EXPERIENCE

Siemens, Software Developer

Feb 2023 - Present

Subsystem Analyzer

- Created dashboards with **React** and **Redux**, incorporating tabular and graphical views to monitor DC/AC substations, improving maintenance and reducing downtime.
- Implemented a feature to plot faults on a custom **SVG diagram** for accurate fault location and substation position visualization using **React-Leaflet** map.
- Developed **RESTful** APIs using **Node.js** and **Sequelize**, optimized to process over 1M rows in seconds for real-time and historical data retrieval.
- Engineered a rule-based monitoring module in **Java Spring Boot**, **Kafka** and **Cron-jobs**, reducing manual monitoring efforts by 40% with user-configurable rules.
- Enhanced fault file processing and data connectivity systems to handle high-volume streams efficiently.
- Deployed components on on-premise servers using **Docker**, ensuring scalability and seamless integration.

Blue Optima, Graduate Software Engineer Internal Automation Portal

Jan 2022 - Jan 2023

- Automated time-intensive manual processes like onboarding and account management using **Java Spring Boot** and GSP.
- Implemented report generation automation with Python, integrated with **REST APIs**, and designed queuing mechanisms using **RabbitMQ** and **Quartz**.

Siemens, Software Development Intern

Feb 2021-Dec 2021

Reporting Tool for Different grid's power Usages

- Automated grid power usage reports with **Java**, **BIRT**, and **Quartz**, enabling dynamic multi-axis trend visualizations and scheduled reporting, reducing manual efforts by hours.
- Developed an intuitive UI using **HTML**, **CSS**, **JavaScript**, and **jQuery**, enabling configurable time-based insights (weekly, monthly, yearly) and implementing user access management.

Locomotive Tracking System

- Built 10+ interactive report UIs and trend dashboards with **React**, **Next.js**, and **PrimeReact**, improving locomotive performance tracking and operational insights.
- Enhanced user management by implementing role-based access control with dynamic navigation menus and export functionality for offline use.
- Integrated APIs with **Node.js** and **Sequelize** to process and visualize real-time data efficiently.

Training: Completed Railway domain training

PERSONAL PROJECT

Garuda Medrone E-commerce site: ([Visit](#) | [Source](#))

- Developed an e-commerce platform for drone-based deliveries using the **MERN** stack and **Material-UI**, with live order tracking, **Google Maps** integration, and **Stripe/Paytm** payment systems powered by **Socket.io**.
- Created an admin panel for managing products, orders, and inventory, hosted on **Firebase** and **Vercel**.

SKILLS

Frontend:

React, Redux, Next.js, JavaScript, HTML, CSS, MaterialUI, Bootstrap, jQuery, EJS, Cypress

Backend:

Node.js, Express, SQL, MongoDB, Java EE, Sequelize, Kafka, Quartz, Node-Cron-Jobs, RabbitMQ, Kafka-connect, BIRT, JUnit, Spock, log4j,

Programming & Problem Solving:

Java, JavaScript, Data Structures and Algorithms (Solved 300+ problems)

Development Tools:

Docker, Docker Compose, Heroku, Vercel, GitHub, Postman, Jira, VS Code, IntelliJ,

EDUCATION

Bachelor of Technology

2018-2022

Siksha 'O' Anusandhan University
CGPA - 9.34, Branch: Computer Science

ACHIEVEMENTS

Infosys Summer of Ideas

- Achieved top 10 placement among 100,000+ applicants in this global innovation challenge

CERTIFICATES

- Java SE** July 2019
- Java EE** Dec 2020
- Web Development** March 2020
Udemy
- Full Stack MERN** October 2020
Learn Code Online
- Google Analytics** July 2020
Google
- Grails** February 2022
Udemy

INTERESTS

Badminton, Reading Books, Listening Music
